# Pick & Go Features Guide

Pick and Go makes picking lists scannable, it displays related picking information on a rugged tablet equipped with a barcode scanner. Products can be picked directly against the selected sales order by scanning them with the tablet. Pick and Go supports serial number, batch number, and expiry date tracking.

As products are picked, stock availability is reduced, providing customer service staff with a live picture of the stock situation. On completion of an order, packing slips and labels can be printed by the operator or warehouse person directly from the mobile tablet.

The barcode scanners tablets are equipped with can be built into the tabler, or a handheld scanner can be connected via bluetooth.

Pick and Go works on top of Ostendo's high quality order system and stock management system. It is easy to use and provides accurate information through an easy-to-use interface. Dispatch workers agree, Pick and Go takes the work out of picking.

Pick and Go – 2013
